

# 10.12.19

## Objectives

- Finish 0006 manual data collection
- Sync AML-283, AML-284 and N2

## Observations

- 0006 data put in dropbox for Monika - lawn line should be made thinner (e.g. 3) so pumping can still be measured if TB behind the line
- Egg-laying in much higher proportions than usual after 2 hours - conditions between the three were almost all the same (15 worms, 2 hours egg-laying)
  - N2 laid the most eggs by a significant degree
  - AML-284 laid a surprising amount of eggs rivaling AML-283 when usually egg-laying is weaker
  - AML-283 surprisingly either on par with or less than AML-284 - will see what proportion hatch tomorrow
