

12.11.19

Observing plates

- (p) AML-284 completely dried out - threw away
- OG AML-284
 - (p) x 4 - still only a handful of worms - plate contaminated
 - © - a little more than a handful crawled out - plate also contaminated
- MT17912 - starved - took about 6 days to reach this stage -> 15C because not a necessary strain for me
- AML-283
 - © - starting to have good growth - not starved yet
 - (p) - worms are staying away from contamination - not starved yet but transferred and did SB to practice
